THE L. L. OLDS SEED CO. · MADISON, WIS.

OLDS' EARLY ORDER GIFT

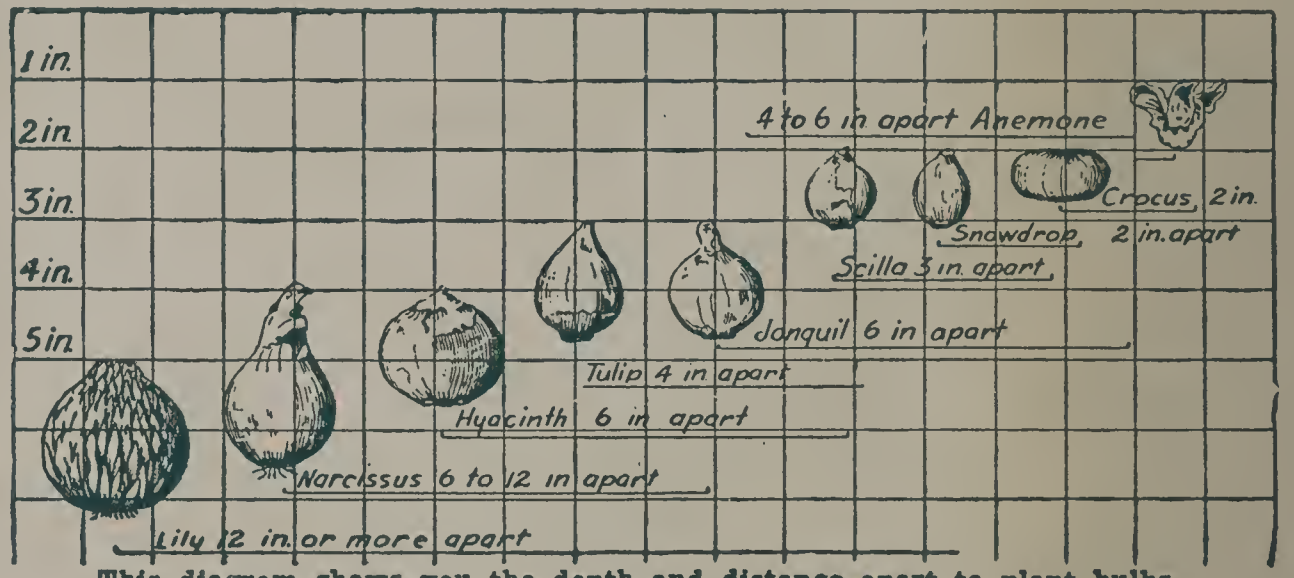
With every order for BULBS amounting to $2.00 or more, received before October 15th, we will include free one dozen assorted early flowering bulbs, our choice. Send your order early and take advantage of our free gift.

Plant Now for Gorgeous Spring Flowers

Now is the time to plant your gay spring flower garden. The bulbs and plants listed in this catalog, with few exceptions, must be planted this fall. They cannot be had in any other season of the year. Fall bulbs seem to have been designed for ushering in the gay spring with all its splendor. Plant the bulbs freely in the border, among the shrubbery, and in the rock garden. They are easy to grow and their vivid beauty will repay the cost many times over. Bulbs planted this fall with proper care will continue to bloom for two to three seasons. To a large extent the beauty of your spring garden will depend much upon the quality and type of material that you plant. Our stocks are of the finest top size bulbs to be had and our list comprises the best varieties for outdoor planting. While we think of fall as bulb planting time, it is also the season to plant Peonies, Iris, Phlox, and other perennials. Our large assortment of varieties are all field grown two to three-year-old plants, ideal for permanent beds and borders. When once established, they will produce an abundance of flowers for years to come with little attention. We urge you to send your order early and take advantage of our Early Order Gift. We will send the items at the right time for planting.

HOW TO ORDER

Send in your order as early as possible on the enclosed order blank. It will be acknowledged at once and bulbs sent as soon as they arrive from Holland. Later in the season our stocks may become broken and it will probably be impossible to replace them. Orders for plants will be sent about September 10th, weather permitting. No postage is required as prices include postage. Our terms are cash with the order or we will ship C. O. D., providing one-fourth of the amount accompanies the order. Field seeds or fertilizers, however, unless quoted postpaid, are sent express or freight collect.



This diagram shows you the depth and distance apart to plant bulbs.

OUR FRONT COVER

The picture on the cover of this book is of a planting of Olds' Darwin Tulips at one of the entrances to Wisconsin's beautiful State Capitol.

OLDS' FIFTY-TWO-YEAR-OLD GUARANTEE

We guarantee all bulbs sent out to be of large size, true to name and to arrive in satisfactory condition. If upon arrival our bulbs are not equal or superior to any bulbs you have purchased or you are not entirely satisfied, they may be returned to us and your money will be promptly refunded. Bulbs and seeds are planted under varying conditions of soil and climate and we will not be responsible for them after they are planted. Nor do we give any further warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants we send out and will not be responsible for the crop.

HOW TO PLANT

Plant only the finest quality bulbs. Olds' bulbs are the best that can possibly be secured. They have a reputation for large flowers and uniformity of size and color. Most bulbs should be planted in the open ground as early in the fall as possible, as this gives them time to make suitable root growth before freezing weather. They can be planted right up to the time the ground freezes, but with late plantings be sure that a very heavy application of mulch is placed over the beds. All bulbs should be planted to the depth shown in the diagram. Set the bulbs firmly, taking care not to leave an air space at the base of the bulb where water will settle and cause the bulb to rot. CHOOSE A WELL DRAINED LOCATION. This is most important. If you do not have a suitable place raise the bed about six inches for good drainage. Bone meal is a good fertilizer to use as it will not burn. See page 21. Cover the bed after the ground freezes with some form of mulch.

Early Single Tulips

THE FIRST TULIPS TO BLOOM

Olds' Early Tulips grow about seven to fifteen inches tall, are entirely hardy and bloom two weeks earlier than Darwin or Cottage Tulips. They usually blossom in April, continuing for a period of two to three weeks. These dauntless leaders in the season's procession of bloom, gaily put forth their valiant colors while most plants still are dormant.

Though not as tall as the later varieties, early tulips rival them in brilliance of color, and frequently in size of bloom.

Darwin Tulips are distinctive on account of their large, single globular flowers and strong, upright spikes. They grow to a height of 24 to 30 inches and are usually in full bloom about Decoration Day.

riumph Tulips—Kansas, Alberio, Lord Carnarvon, Telescopium.

New Triumph Tulips

Not since the Darwin Tulips were introduced has so great an improvement been made in the Tulip family as in the new Triumph class. They are a hybrid of the Darwins and Early Singles. The Triumph Tulips have a distinctive beauty of their own and a clear luminous color, a quality which will make you want them in your garden. Being a cross between the Darwins and the Early Tulips, they begin to bloom two full weeks ahead of the other tall growing Tulips and continue to bloom right on through with the Darwins. They come at a time when color is badly wanted in the garden.

Giant Breeder Tulips

MANY RARE SHADES FOUND IN THIS CLASS

This fine, old May-flowering type of Tulip has been neglected for many years, but is again becoming popular; in fact, Breeder Tulips have, for the past few years, been given great prominence in many of the strictly up-to-date gardens.

They are very similar to the Darwins in their tall growth, and have even larger flowers. They bloom about the same time, but have an entirely different range of colors, comprising bronze, terra cotta, orange brown and other artistic tones altogether wanting in the Darwins.

BRONZE QUEEN. (28 in.) Soft golden bronze. **Prices: 6 for 30c; 12 for 50c; 100 for $3.75; 1,000 for $32.20, postpaid.**

The petals of these tulips have peculiarly feathered and fringed edges and the shape of the flower, especially before it opens, resembles the neck of a parrot. A magnificent, large flowering, tall growing late tulip.

FANTASY. (18 in.) A remarkable Parrot Tulip with a straight, strong stem, a quality which has always been lacking in Parrot tulips. This variety is a sport of the well-known Darwin tulip, Clara Butt, and has the same clear, pink color as its parent, combined with artistic form of a Parrot tulip. Each petal is over three inches long, and two inches across. The center of the petals on the outside is marked emerald green. **Prices: 6 for 30c; 12 for 50c; 100 for $3.80; 1,000 for $33.50, postpaid.**

Rembrandt Tulips

Rembrandt Tulips have long stems with large flowers and they bloom at the same time as the Darwins. They are really broken forms of Darwins, the difference being in their unique color; the flowers are striped and variegated. Too gaudy to plant alone in large beds but beautiful planted in with other tall tulips.

SPECIAL MIXED REMBRANDT TULIPS. Prices: 6 for 35c; 12 for 60c; 100 for $4.40; 1,000 for $39.60, postpaid.

Botanical or Wild Tulip species are recommended for rock gardens and hardy plant borders. The general characteristics of these are bright colors and recurved petals. They are very early flowering.

Dainty Daffodils or Narcissus

Plant Narcissus this year.

Many consider the Narcissus or Daffodil the most important of the spring flowering bulbs. Coming into bloom two or three weeks before the earliest tulips, they open the real flower season. They are fresh and dainty, require no special care, are equally satisfactory as indoor or outdoor plants and, left undisturbed in their garden nook, will increase in size and beauty yearly. There are many varieties in each class and we have selected the ones we consider the best. **All our bulbs are American grown, double nose. 6 bulbs at half the price of 12 and 50 for half the price of 100.**

HORTICULTURAL PEAT MOSS

Peat Moss is an indispensable material for the modern garden. Primarily its purpose is to put soil in good condition and allow proper aeration and to retain moisture, both vital factors in the proper growth of plants. When added to heavy soil, it breaks it up and in light soil it gives body and moisture-holding capacity. It should be remembered that it is in no way a fertilizer, but primarily a soil conditioner. Peat Moss makes the finest mulch for plants and bulbs as it does not mat down and choke the plants as leaves have a tendency to do, nor will it bring weeds into your garden as is often the case with hay or straw. It is also fine for the rock garden as it helps to check weed growth and prevent washing of the soil in heavy rains. **Prices: 1 bu. sack, 50c; 5 bu. sack, $1.50; 1 large bale (22 bu.), $3.25. Prices are f. o. b. Madison. Shipping weight, 8 pounds per bushel.** A bushel sack can be sent by mail and if wanted by parcel post, be sure to include postage for mailing.

The wonder flower of the floral kingdom. Just set the bulb on the table, in the window or shelf. Will bloom without vase, soil, water or care. As soon as the bulb is given light it will begin to grow producing beautiful Crocus-like flowers. Note illustration. As the flowers fade, cut them off and others will follow in succession. Each bulb will produce from six to a dozen flowers. When through blooming, the bulb can be potted and allowed to grow until July when it should be harvested and dried and then placed in the darkness for a few weeks. They can then be used for indoor decorations again. They flower in September so order early. **Prices, each, 25c; 3 for 65c; 6 for $1.20, postpaid.**

Giant Blossoming Hyacinths

For Outdoor Planting. The 15 and 16 centimeter bulbs are the most satisfactory sizes to use for outdoor planting. Smaller bulbs are often offered but we do not recommend them. Select a well drained location and spade to a depth of 12 inches, plant the bulbs according to the diagram shown on page 2. Bulbs may be planted up to the middle of November but it is best to plant just as soon as you receive the bulbs.

Hyacinths seem to do particularly well planted a short distance from the foundation of the house on the east and south exposure.

Cover the bed well with mulch as soon as the ground becomes frozen.

For Indoor Planting. Use only the largest size bulbs such as our 19 centimeter size, pot 1 bulb in a five-inch pot, or 3 in a six-inch pot. Place a piece of broken pot or a stone over the hole in the pot; then practically fill the pot with rich, light soil, break off all the shoots from the main bulb and place in the soil so that the top will be about one inch from the top of the pot; then fill the pot with soil up to one inch from the top, water well and set in cool, dark place. After 6 to 10 weeks they can be brought to the light.

Hyacinths can also be forced in water but usually not as satisfactorily. Fill the glass with water so that it just touches the bulb. Place a piece of charcoal in the water to keep it sweet, put away in a cool, dark place until roots are about 8 inches long and then gradually bring to the light.

THE FIRST FLOWERS OF SPRING.

CROCUS

These bright and fascinating little flowers are the earliest of all. The snow has hardly disappeared before they thrust their pretty blossoms through the cold ground in answer to the first warm sunshine of spring.

Although most showy when massed in big beds or planted in rows of distinct colors, they are also very effective sprinkled over the lawn and among the trees and shrubbery.

We offer the following separate colors of Crocus:

	12	25	100	1,000
White, yellow, blue and striped.....	$0.25	$0.45	$1.65	$12.00

Hardy Lilies

The beautiful fragrant Lilies are considered by many too difficult to grow. However the hardy varieties which we list are no harder to grow than a tulip. They blossom in mid-summer when fine flowers are most welcome.

CULTURE. Select a place to plant that is well drained. The soil should be spaded thoroughly 15 to 18 inches deep. Do this early in the fall as lilies cannot be moved until late and it is hard to work the ground late in the season, especially after we have had a light frost. Enrich the soil with leaf mold and sheep manure in equal proportions. Set the bulbs 4 to 8 inches deep, depending on the size, tilting to a 45-degree angle. To insure good drainage pack sand around the bulb. Place about four inches of mulch over the bed. See page 18 for Day lilies.

Madonna Lily.

LILIUM CANDIDIUM OR MADONNA. (Ready Sept.) Plant about the first of October. They grow to a height of two to three feet and bloom about the first of July. EVERBEARING STRAWBERRIES

GEM. Without exception the best everbearing strawberry. We have tried all the outstanding new varieties and consider this the best. The berries are large, uniform in size and shape and real beauties. Deep glossy red clear through. Never green tipped or white-fleshed which is common among everbearing varieties. The berries ripen red from top to bottom, inside and out. The flavor and quality is wonderful. Berries sweet and delicious and so firm they will keep for days after picking. Plants large and robust. Set a new strawberry bed now using Gem plants. You can't go wrong. **Price: 50 plants, $1.00; 100 plants, $1.75; 500 plants, $6.75, postpaid. By express, 1,000 for $12.00.**

PROGRESSIVE. The first successful Everbearer. An old favorite, a tried and proven variety. Does well on all soils and in all climates. The dark glossy red berries are medium to large in size. A very heavy bearer especially through the summer and fall months. Plants set now will give a large crop next summer and fall, another the following summer and still another in the fall. We highly recommend this variety for home or nearby market. **Price: 50 for 80c; 100 for $1.35; 500 for $6.00, postpaid. By express, 1,000 for $8.00.**

BEAVER. (Perfect Flowering.) Our new June bearing strawberry, the Beaver is an offspring of the Dr. Burrell and Premier and a much better commercial berry than either one, as the berries are larger, sweeter and firmer. **Will stand unfavorable soil and climatic conditions better than any other variety.** The berries are dark red to the center, of a uniform size and the texture firm, requiring picking not more than twice a week. A deliciously mild and sweet berry. In season it is classed as an extra early, but it will bear on through with the late varieties.

SENATOR DUNLAP. (Perfect Flowering.) Considered by many the best all-around June strawberry. At any rate it is the one most widely known. The plants are medium in size, long rooted and thoroughly drouth resistant. The variety is unusually productive, beginning to ripen early and continuing to bear for a long time.

The fruit is of medium size, smooth, regular and firm and the color is a beautiful red extending well to the center of the berry.

DORSETT. (Perfect Flowering.) A new frostproof June bearing strawberry which we think is going to be very popular and profitable with the Wisconsin strawberry growers. Its outstanding characteristics are earliness, quality of fruit, and resistance to drouth and heavy rains. It produces berries that are large, ideal in color, and uniform in shape. Berries are flame-red and they hold this color after picking. Very sweet and sub-acid. Yields of 1,000 crates per acre are not unusual.

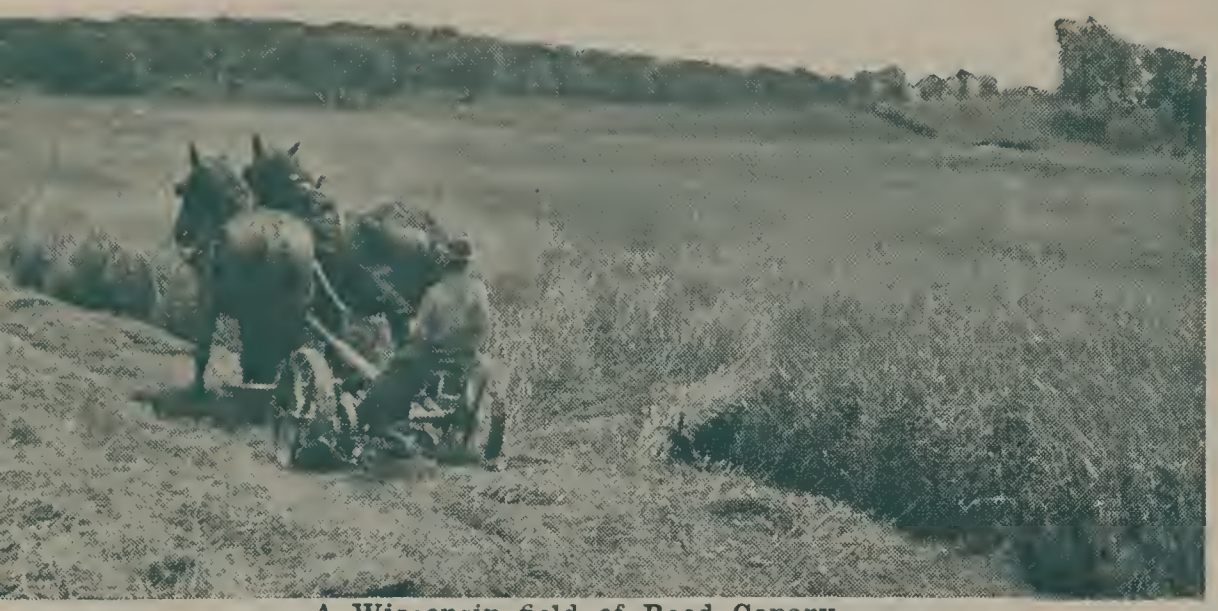
Field Seeds for Fall Sowing



A Wisconsin field of Reed Canary.

Reed Canary Grass

The New Grass for Wisconsin Lowlands.

Reed Canary Grass is a very valuable new perennial hay and pasture crop especially desirable for low, marshy land. Nothing like it has been thus far produced as it puts land that is just a dead waste into production of valuable forage. Continues to grow without care or attention. Very highly recommended by the Wisconsin and Minnesota Experiment Stations.

Prices now are very low. Get started with this new grass while the seed is cheap.

For Pasture it lengthens the grazing season as it starts very early in the spring, and beginning before June 1st, will furnish an abundance of pasture throughout the entire season until late in the fall.

For Hay. It makes a heavy yield of good quality hay, better than timothy and far superior to wild hay. Ordinarily two or more cuttings can be made in a season. As high as seven tons of hay per acre have been produced in one season.

CULTURE. Seed sown just before the ground freezes up will lie in the ground over winter and be ready to grow early in the spring. The ground in the fall is usually dry so that teams with implements can work the soil. Sow 4 to 6 pounds to the acre with a drill. Seed can also be sown in August and September with good results. There is danger, however, of young seedlings winter-killing, or drowning out in the spring, with unfavorable weather.

Prices, by mail: Lb., 40c; 5 lbs., $1.60. See Price List for larger quantities.

Common Winter Rye

See Price List for Present Prices.

TREAT YOUR FALL GRAINS WITH CERESAN

Lower your production cost per acre—enlarge your profits—by increasing yields with **New Improved** Ceresan, the ethyl mercury phosphate dust disinfectant. Treat all fall grains with **New Improved** Ceresan to control seed-borne smuts and scab seeding blights. It is effective and inexpensive. Only ½ ounce (there is a measuring spoon in each can) is required per bushel of seed. Costs but 1⅞ to 2½c a bushel of seed. Easily and quickly applied by 20 to 25 revolutions of seed treater or 3 turnings with a shovel. Seed should be treated 24 hours before planting. No wetting of the seed nor reduced drilling rate.

Prices: 1-lb. size, 70c; by mail, 80c; 5-lb. size, $3.00; by mail, $3.25.

Winter Wheat

WISCONSIN PEDIGREE NO. 2

If you are going to sow some winter wheat this fall and a few acres may prove very profitable, do not sow "just wheat" but sow **Wisconsin Pedigree No. 2.** This is one of the list of famous pedigree grains put out by the Wisconsin Experiment Station. It is from the well-known Turkey Red and has all the good characteristics of that variety—hard red grains, bearded heads, vigorous growth and extreme hardiness.

Wisconsin Pedigree No. 2 is the hardiest of all winter wheats for this section, produces large, plump kernels and outyields all others.

See Price List for present prices.

Winter Rye

WISCONSIN PEDIGREE NO. 6 WHITE PLANT RYE THIS FALL

Wisconsin Pedigree No. 6 is a new strain of winter rye recently released by the Wisconsin Experiment Station. Its strong feature is its **very light color, almost pure white.** Prof. Leith says: "**The Pedigreed White Rye** is the result of an effort to get a nicer appearing rye than we had in the old Pedigree Schlanstedt and meets the expectations of millers and bakers who prefer lighter colored ryes."

This new rye is just as good a yielder if not better than the old Wisconsin Pedigree and it has a big advantage in quality. It is also shorter in straw. We recommend it as the best in rye.

See Price List for present prices.

Parkland Brome

THE NEW BROMUS INERMIS

Parkland is a new variety of Brome developed by Experimental Associations in Canada. It is a selection of inbreds from the common Brome Grass (Bromus Inermis). It differs from common Brome Grass essentially in that the plant lacks the strongly spreading underground stems, and the general type of plant that composes the strain is dense and leafy as opposed to the more open stemmy types found in commercial Brome. The plants are on the average slightly shorter but their yield of hay and seed is about the same as commercial Brome. The higher percentage of leaves in Parkland makes a better quality hay. It is well adapted to dry and poor type soils. Parkland Brome is easily eradicated when planted with grass mixtures. It is a good companion grass with Alfalfa as it helps keep out the blue grass and it is a wonderful pasture grass. We are one of the first American seed houses to offer this new grass. Our stock is imported from Canada and is No. 1 grade. **Prices: Lb., 60c; 5 lbs., $2.40, postpaid.**

Timothy Seed

Our Timothy Seed is the purest and best that can be obtained. It is all thoroughly recleaned and free from noxious weeds, with high tests most of it testing 99.6 per cent purity or better. The seed crop was short and the acreage is reduced. We look for higher prices later on, so order early.
See price list for present prices.

Timothy and Alsike Mixed

Contains 25% Alsike Clover. See price list for present prices.

Red Top will produce a very desirable hay and will thrive and yield well especially on low, flat ground not adapted to clovers and alfalfa. For best results, Red Top should be sown early in September.

Olds' Lawn Grass Mixtures

Fall is an ideal time to make a new lawn or reseed the old one. Grass seed sown in August and September will sprout and thrive for a long period under favorable conditions before winter sets in. Then, too, weeds are gone in the fall permitting the grass to grow without interference. The winter is not nearly as severe on a lawn as the drought and heat of the summer, and by the time summer arrives the new grass will have had six to seven months of good growing weather so as to be well established for the summer ordeal. Feed your lawn Vigoro, the complete plant food. Apply at the rate of 4 lbs. per 100 square feet. Reseed the bare places. Use seed freely, at least one pound for each two hundred and fifty square feet, for reseeding about one-half this amount.

Olds' Lawn Grass has won a reputation and is widely used by critical landscape gardeners. We offer four very fine mixtures varying in price according to the amount of highest priced seed used. None of them contain timothy and none are cheap mixtures.

MADISON PARKS LAWN GRASS

Madison Parks Lawn Grass is a very carefully prepared mixture of high grade, heavy seed, that has been used extensively for several years in the parks about Madison. The seed is composed of White Dutch Clover, Creeping Bent, Rough Stalked Meadow, Chewings' Fescue, Fancy Red Top, Fancy Kentucky Blue Grass and others mixed in proper proportion. We recommend Madison Parks Lawn Grass as our best lawn mixture.
